UNITED STEEL

Stay strong.

**Together, delivering
products you
CAN trust**

Two companies with One quality vision

With potential non-compliance issues around imported steel products from overseas mills, third party testing has become absolutely essential for the industry going forward.

United Steel and Pipes NZ have responded to industry challenges by introducing a Quality Management System (QMS) which is currently undergoing 3rd party certification assessment to ISO9001.

This means, each and every incoming steel product is batch tested for its mechanical strength within our accredited IANZ mechanical testing laboratories.

IANZ is accredited by ILAC

ILAC is the international organisation for accreditation bodies operating in accordance with ISO/IEC 17011

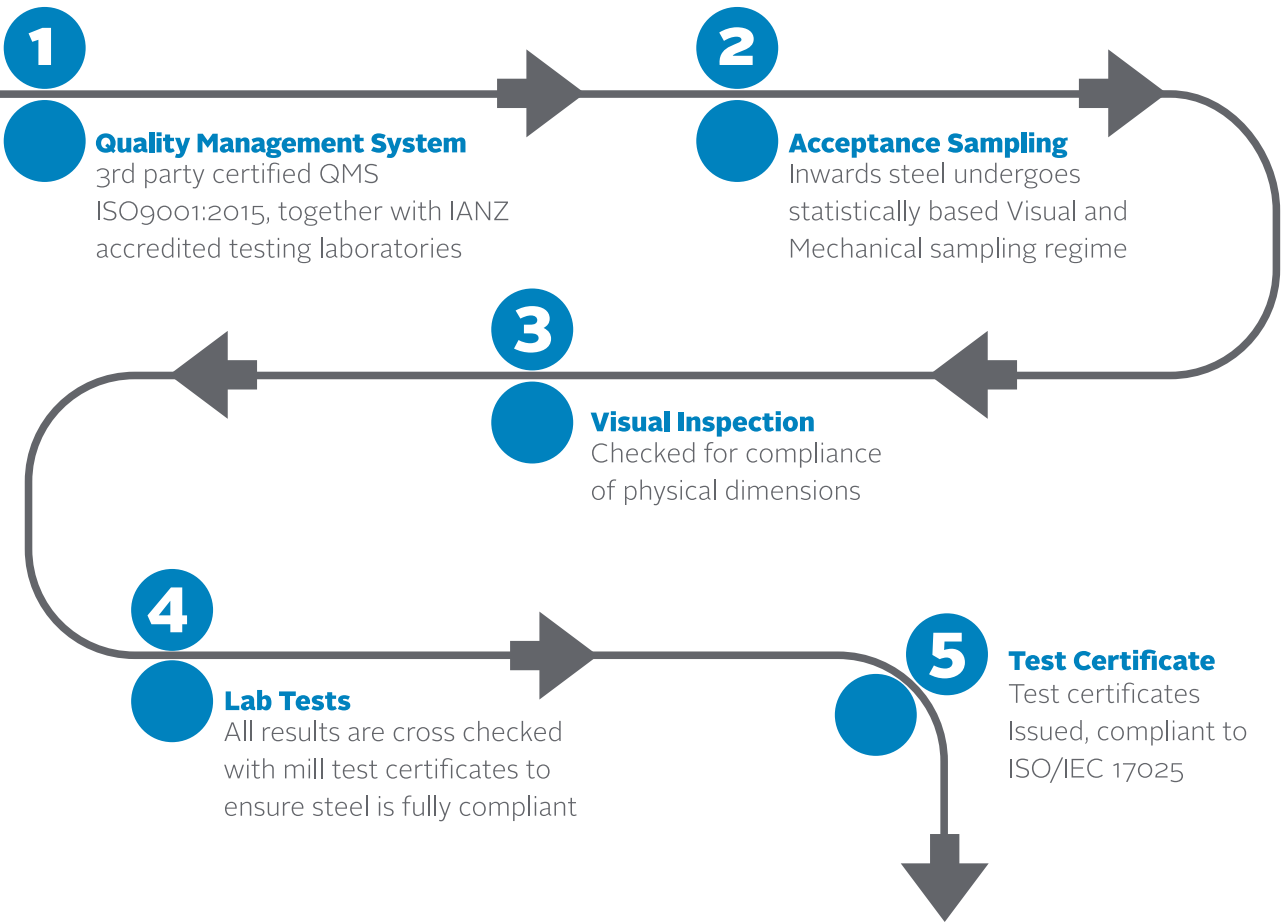

ILAC is embedded in the accreditation of conformity assessment bodies including:

Calibration labs (using ISO/IEC 17025)

Testing labs (using ISO/IEC 17025).

Our accredited laboratories in Auckland and Christchurch test to these product standards:

ASNZ4671.2001	steel reinforcing materials
ASNZ1594.2002	hot rolled steel slabs
ASNZ3678.2016	hot rolled plate, floor plate & slabs
ASNZ 3679.1.2016	hot rolled bars & sections
ASNZ3679.2.2016	welded sections
ASNZ1163.2016	hollow sections

QMS Reassurance

One simple path leads us
to provide one great
Industry Benefit

A simple pathway that continues our promise to provide our customers with reassurance that's both

Strong + Trustworthy.
